

## Optimize tool stock and purchasing

### Master efficiently stock control and tool quality.

With the *WinTool Logistic* module you can manage tool components anywhere in the MFG process. Using the interactive dialog, barcodes and 'batch booking,' you efficiently book tools to cost centers or machines. The browser based user interface can be easily customized for data entry hardware like wireless barcode scanners: this equals quick and error-free stock management. *WinTool* calculates purchase requisitions automatically (minimum stock) and you easily revise orders in the elaborate shopping cart. Delivery date control secures availability and data analysis is the basis for optimizing technical tool quality and assortment.

### Features
